a recursive structure of node objects.\n * A node contains one or more of the
following components:\n *\n * - A value: Representing the output of the node.
If the node is not a leaf,\n * the value is only present for analysis i.e.
it is not used for\n * predictions.\n *\n * - A condition : For non-leaf
nodes, the condition (also known as split)\n * defines a binary test to
```

```

branch to the positive or negative child.\n *      - An explanation: Generally
a plot showing the relation between the label\n *      and the condition to give
insights about the effect of the condition.\n *      - Two children : For non-
leaf nodes, the children nodes. The first\n *      children (i.e.
"node.children[0]") is the negative children (drawn in\n *      red). The second
children is the positive one (drawn in green).\n *      */\n\n/**\n * Plots a
